

## WIX 46907 Air Filter Product Update

A recent update has taken place for the 46907 with a notable change in the sealing design.

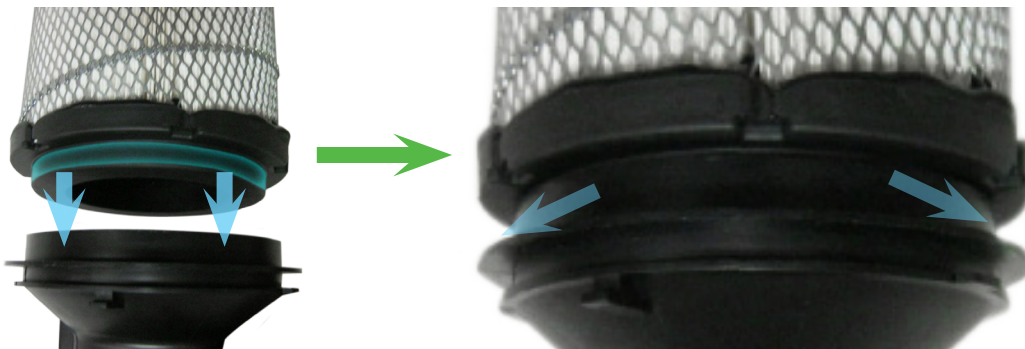

**Previous 46907**

*The previous seal is similar to the original equipment service (OES) that seals over the outside of the flow tube.*

**Updated 46907**

*The updated design seals into the inside of the flow tube. The updated seal is more robust and easier to install/remove.*

The update is part of an ongoing change. Principal applications included in this update are Chevrolet/GMC C4500 and C5500 trucks. It should be noted that both the previous and new 46907 are fully interchangeable and suitable for use on all recommended applications.
